

MINIATURE AND QUICK GROWING VEGETABLES FOR WINDOWSILL GARDENING

June,23,2020

If you want a windowsill garden or you need a list of veggies that will grow fast and compact in tubs, here's a list.

Leafy greens- when choosing a pot for growing leafy greens, the most important part is to make sure it's wide enough instead of focusing on depth.

- *loose leaf lettuce*
- *Spinach*
- *Mizuna*
- *Mustard*
- *Rocket*

You can buy seed packet mixes such as 'hot and spicy' for your mustard, rocket, and mizuna all in one to sow together in the same pot for a good price of £2- £3. Or 'stir fry mixes' for plants such as kale, cabbage and mustard for harvest at seedling stage.

-
- *Microgreens ! These need a wide but shallow tray to grow them. They're a mix of seeds harvested at a week or two old. For a super concentrated nutrient boost try growing these.*

- *Sprouting seeds - a soilless way to grow your greens.*

Grow guides for the above two coming soon !

Root vegetables indoors. Tip- remember spacing for root veggies like radish, while they can tolerate growing in small spaces they won't develop a good sized root to eat.

- *Radish - these can tolerate small space, but still make sure to not overcrowd them- as they wont develop a large bulb. Radishes can be sown into a windowsill planter or a 1-2 l pot. Good varieties will be cherry belle and similar, as they are small and compact root bulbs.*
- *Spring onions .*

-
- *Peas- If you're growing peas then a good sized container that is sturdy so it doesn't topple with supports. Choose a dwarf variety so it's manageable and quicker growing.*

Tomatoes, peppers and chilli !

These all have long growing seasons, needing to be sown in January-March and harvest begins from July onwards. They also need relatively large pots for growth to give a good harvest. If you have a sunny-bright, warm windowsill then you can grow these.

Check the grow guides for details on growing these.
